Happy-path journey for the demo (end-to-end)

1 Buyer login → 2 Dashboard: ENG-037 RUL 18 cycles → 3 View Replacement Options → 4 Compare options → 5 Product Detail → 6 Cart → 7 Checkout + place order → 8 Supplier: Processing → Shipped → 9 Buyer tracks order

All spec screens are now designed. Remaining work is hi-fi polish, loading/error states per screen, and tablet variants.

1 · AI assists, never replaces

Buyers can browse, search and buy without ever using RUL. Every RUL result leads to an action: Understand, View Replacement Options, Product Detail, Cart.

2 · Honest scope of the model

The model predicts remaining cycles only. No fault diagnosis, no confidence score. Recommendations come from engine-model compatibility plus price, stock, delivery and supplier rating. Urgency: Normal / Monitor / Prepare / Prioritize (20/40/80 cycles).

3 · Not an ERP

Stock is a listing quantity. Payment is a demo checkout. No escrow, procurement upstream, warehouse transfer, work orders, refunds or accounting. Login is required only for saved data and transactions.

SITEMAP · 4 ROLES · RBAC

AeroRUL full sitemap

Every page of the marketplace by role, with route and priority. Category is a Marketplace filter and Cart is a header icon, so neither appears in the Buyer sidebar.

Legend **P0** core demo slice **P1** must-have **P2** polish Key page in AI → e-commerce flow All 46 nodes are designed as boards on this canvas

Flow A · Access & routing

Guest / → Marketplace / Product (browse freely) → Login / Register → Role check → Buyer · Supplier · Admin dashboard

Flow B · RUL to purchase (signature)

Dashboard alert → My Engines → Engine Detail → RUL Analysis (upload CSV) → Urgency → Recommendations → Compare → Product Detail → Cart → Checkout 2–4 → Confirmation → Orders

Flow C · Seller fulfilment

Supplier Orders: New → Confirmed → Processing → Shipped + tracking → Delivered → Buyer sees update in Order Detail & Notifications

Flow D · Governance

Supplier registers → Admin approves → Supplier adds product → Admin moderates (optional) → Listing live → Reports handled in Reviews / Reports

Scope limits

Not an ERP or MRO system. Demo payment only. Stock is per listing. No escrow, warehouse transfer or accounting.

Model honesty

RUL predicts remaining cycles only. Urgency: Normal / Monitor / Prepare / Prioritize at 80 / 40 / 20 cycles. No fault diagnosis, no confidence score.

Responsive

Desktop-first sidebar shell. Tablet: drawer sidebar, 2-column grids. Mobile: 1 column, filters in drawer. Key mobile screens are on this canvas.

AeroRUL
AVIATION MARKETPLACE

Aviation parts marketplace with RUL-based replacement planning

Connecting airlines, MROs and verified suppliers: see which engines need attention, then buy compatible replacements in the same place.

Predictive replacement planning
Remaining useful life in cycles, mapped to compatible catalog parts.

Verified suppliers
Approved sellers with ratings, stock and lead times on every listing.

Fast B2B procurement
Checkout with purchase reference and five-step order tracking.

How RUL-based replacement works

01 **Predict**
Upload the latest sensor window. The model estimates remaining useful life in cycles.

02 **Understand**
See urgency: Normal, Monitor, Prepare or Prioritize, with a plain-language note.

03 **Recommend**
Compatible listings are ranked by availability, price, delivery and supplier rating.

04 **Purchase**
Compare, add to cart, check out and track the order.

RUL estimates remaining cycles only. It does not identify which component is failing.

RUL Analysis

Estimate remaining useful life for one engine, then see compatible replacements.

1 Select engine | 2 Upload sensor data | 3 Run prediction | 4 Result and next step

Engine and sensor data

Engine

ENG-037 · CFM56-7B

eng037_sensor_window.csv
Valid: 30 cycles, all required sensors present

Required: the latest 30-cycle sensor window, one engine per file (CSV).
Other states: validating, invalid file with message, no file uploaded.

Run prediction again

Previous predictions

Cycle 1,485	18
Cycle 1,455	47
Cycle 1,425	78

Predicted remaining useful life · ENG-037

Prioritize

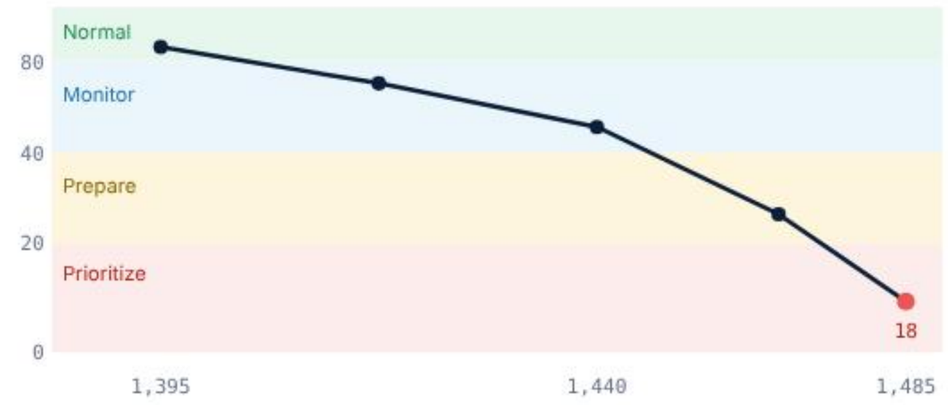

Plan replacement soon. Remaining life is below the 20-cycle threshold. Review compatible replacement options before the limit.

This estimates remaining useful life only. It does not identify which component is failing.

View compatible replacement options →

ENG-037

CFM56-7B · Boeing 737-800 · Demo Horizon Airlines

Run new analysis

View replacement options

Engine information

Engine ID	ENG-037
Model	CFM56-7B
Aircraft	Boeing 737-800
Current cycle	142
Last analysis	Oct 9, 2026
Sensor files	4 uploaded

LATEST PREDICTION

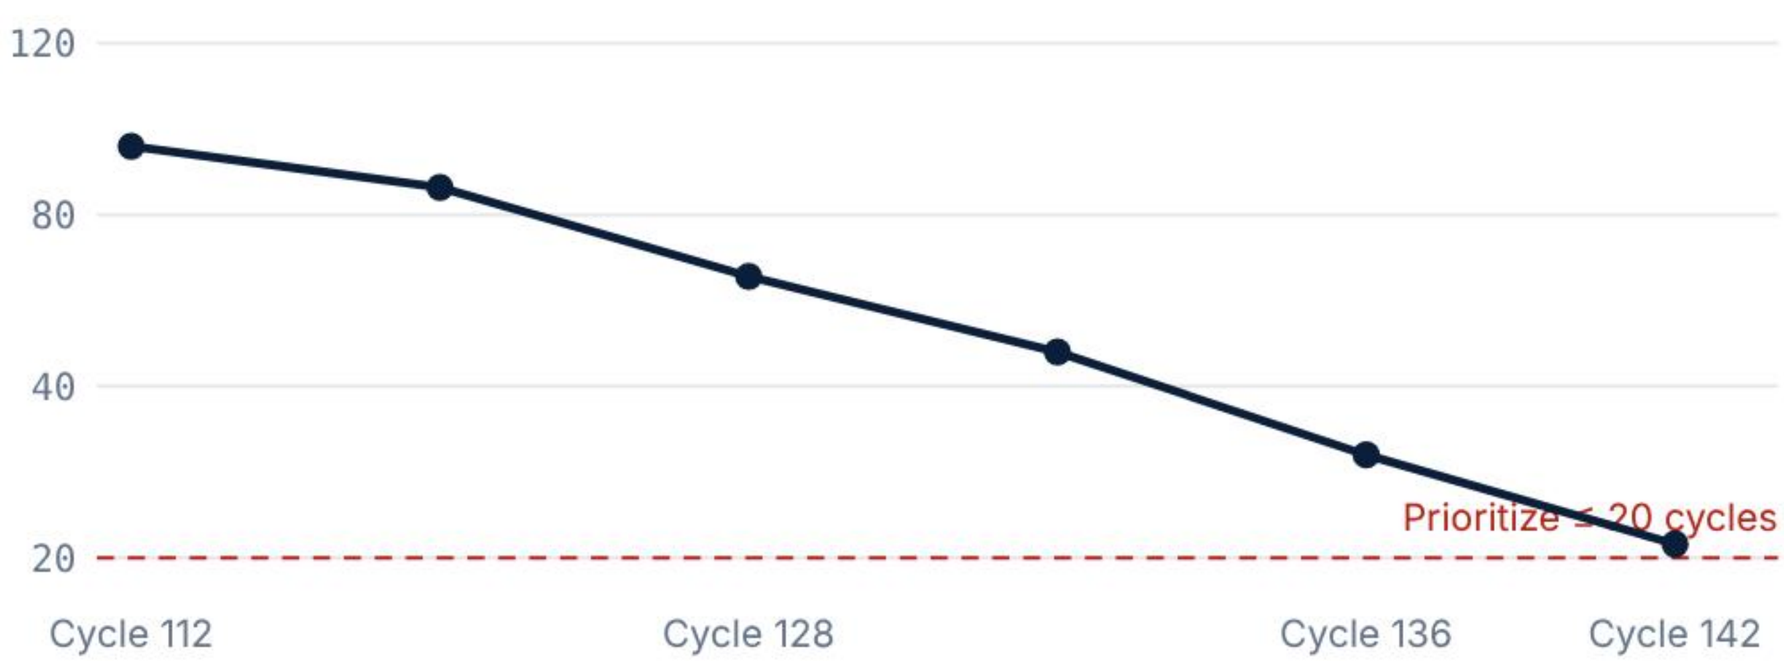

18 cycles

PRIORITIZE

Predicted remaining useful life is below the 20-cycle threshold. Plan replacement now. The model estimates remaining cycles only and does not identify which component is failing.

RUL history

Predicted RUL per analysis (cycles)

Sensor upload history

UPLOADED	TYPE	FILE	RUL (CYCLES)	URGENCY
Oct 9, 2026 10:42	CSV	sensors_eng037_c142.csv	18	Prioritize

How AeroRUL works

The model predicts remaining useful life. You decide what to buy. You can also use the marketplace without RUL.

1

Add your engines

Register each engine and its model in My Engines.

2

Upload sensor data

Upload a CSV and run the RUL prediction.

3

Read the urgency

Normal, Monitor, Prepare or Prioritize, based on predicted remaining cycles.

4

See compatible parts

Recommendations are ranked by compatibility, availability, price, delivery and supplier rating.

5

Buy as usual

Add to cart, check out with demo payment, track the order.

What the model does not do: it does not diagnose which component is failing and does not give a confidence score. Recommendations are a ranking, not a compatibility guarantee.
